

DOBBIN Disc-Writer

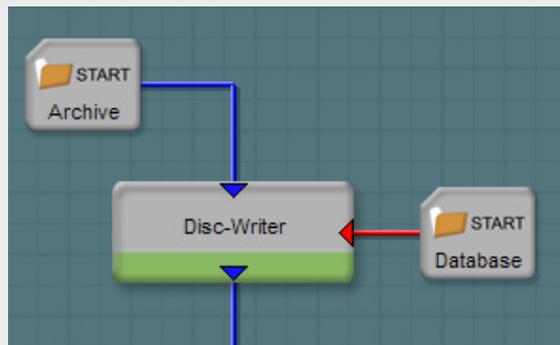

Direct-to-Disc Publishing with DOBBIN and RIMAGE Producer III

Cube-Tec has extended DOBBIN's power and versatility through the addition of a new module that provides „on-the-fly optical media production“.

This new module facilitates the recording of DOBBIN generated media files directly to optical storage, for the production of single or multiple copies on Blu-ray disc, DVD or CD Audio. This is an extremely efficient and cost effective way to produce optical media back-ups, or automate the process of producing individual user copies. Additionally, a color printer is integrated for user definable label printing.

Simplified management of integrated optical media production

Disc-Writer can easily be combined with other DOBBIN features such as automatic restoration, mastering, encoding and conditional workflow branching. Disc-Writer jobs are easy to handle via the JobDesigner „visio-like GUI“ and can also be programmed to start auto-

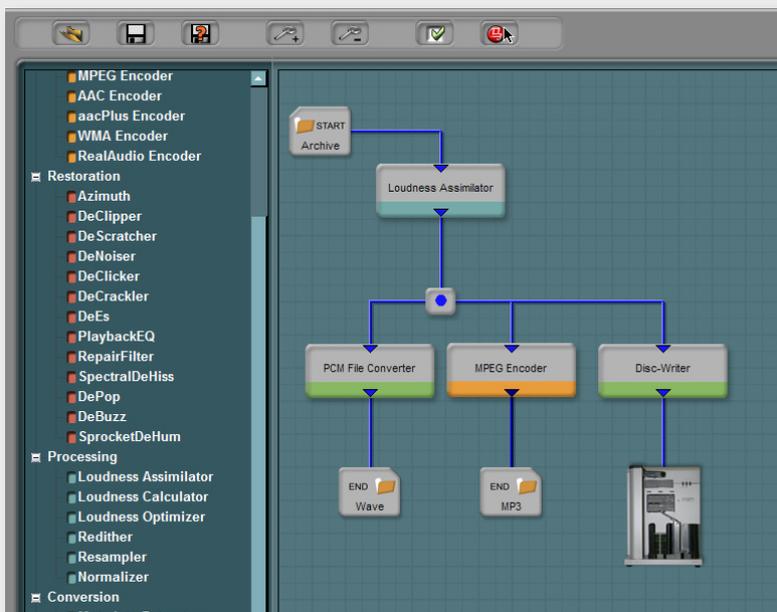

matically as new jobs arrive.

Automatic optical media Production

The Disc-Writer is able to store the output of a DOBBIN-Job on different Media, in different file formats (Blu-ray, DVD, CD Audio and CDROM) in multiple copies, if required. In back-up mode, if the amount of data exceeds the capacity of a single optical medium, the output is intelligently divided for multiple discs.

The connected RIMAGE

Producer III handles the mounting of drives automatically, eliminating the need for operators to handle manual tasks - including the creation of disc labels, which can be generated from Metadata within the automated DOBBIN workflow.

DOBBIN Disc-Writer

Creating Compilations from the Archive

The process of title compilation is automated within 'Cube-Workflow'. A database search by archive number, artist, and other terms simplifies the process of pre-selection, which can be used for the creation of media picklists. Other powerful capabilities such as checking media duration further simplify the workflow.

Archive Back-Up

The RIMAGE Producer III is only one example of the Direct-to-Disc workstations that are compatible with DOBBIN. DOBBIN's support of CD, DVD and Blue-ray writers broadens the range of storage options available to archives.
